

Resharpending- and Repair-Service

For all common cutting tool brands

With our grinding centers in Europe, Asia and America we are globally available for you. The sophisticated machinery, combined with our manufacturing know-how, gives »new brilliance« to your blunt cutting tools. We grind your cutting rotors and cutting blades fast, reliable and professionally – even those from other manufacturers.

Your benefits

- Resharpending with preservation of the tooth profile
- Longer lifetime of cutting tools
- Guarantee of quality with certificate
- Professional repairs by OEM

Resharpener- and Repair-Service

For all common cutting tool brands

Resharpener-Service

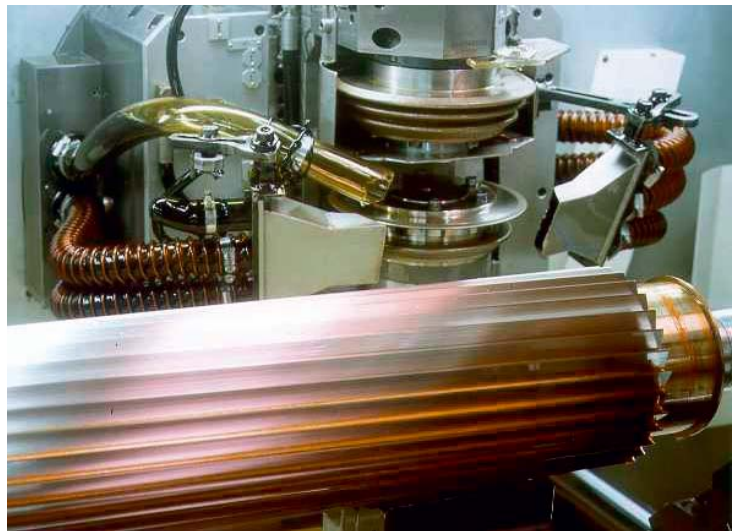

The resharpener of a cutting rotor is the most important process in regards to the lifetime of rotors. The operating time between grindings, the total lifetime of the cutting rotor as well as the pellet quality strongly depend on the quality and professionalism of the resharpener process.

With over 60 years of experience in pelletizing and more than 6100 rotor resharpener per year we are the world's leading provider of cutting rotor repair services. More than 35 grinding machines at different global locations additionally guarantee a short processing time for our customers.

To ensure perfect product quality, we expertly and precisely sharpen the entire tooth profile, resulting not only in superior pellets but also in a reduction of your total maintenance costs, shortened downtime of your pelletizing line and longer service life for your cutting tools.

Your benefits

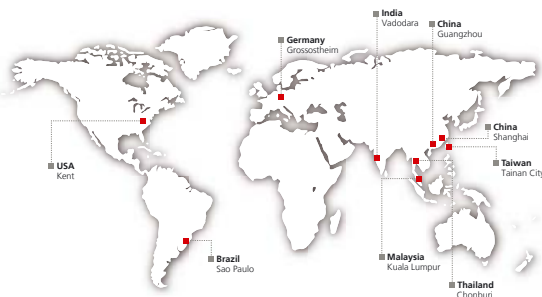

- Resharpener and repair available at several service centers worldwide
- Resharpener with preservation of the tooth profile
- Repair of tungsten carbide rotors by replacing of knives
- Repair of stellite rotors by welding
- Higher lifetime of rotors through minimal diameter reduction
- Effective cooling of rotor during resharpener ensures maximum rotor lifespan
